

THE PORT OF BELIZE

CHALLENGE

The Port of Belize needed to establish an Electronic Single Window (ESW) for trade.

SUMMARY

Internationally, ACI has partnered with Hudson Analytix on projects with the Port of Belize, the Port of Honduras, and the Port of St. Vincent and the Grenadines. For the Belize project, ACI utilized an ICT expert to research trade and IT data to determine solutions for the Feasibility Study for the Establishment of an Electronic Single Window (ESW) for Trade. After collaborating with Hudson on an initial Inception Report detailing the purpose of the overall project, an assessment of the existing capabilities was made and ACI reviewed the Situational Awareness Analysis document, providing SME input for a final draft. ACI Solutions led a video conference session with ministry members from more than 20 Belize and government agencies to obtain infrastructure data. Ultimately, the Belizean client and the Organization of American States (OAS) accepted the ACI assessments and recommendations for the ESW concept.

SOLUTION

Utilizing an ICT expert with experience in cybersecurity, ACI researched trade data to determine solutions for the government ESW and led a video conference session with ministry members from more than 20 Belizean government agencies to obtain infrastructure data.

OUTCOME

The Ministry of Foreign Affairs and Foreign Trade Belize, and the Organization of American States (Inter-American Committee on Ports), accepted the ACI Solutions assessments and recommendations for the Electronic Single Window concept.
